

Fuel Quality & Improved Performance

You're probably familiar with the Biobor name. Originally developed and formulated by U.S. Borax in 1965, Hammonds Fuel Additives, Inc. has owned and marketed the flagship Biobor JF brand for nearly 30 years. Jet and diesel engine manufacturers have come to recommend this outstanding additive in many of their operating manuals as the preferred industry standard fuel additive for eliminating Hydrocarbon Utilizing Micro-Organisms (HUM Bugs) in fuel tanks.

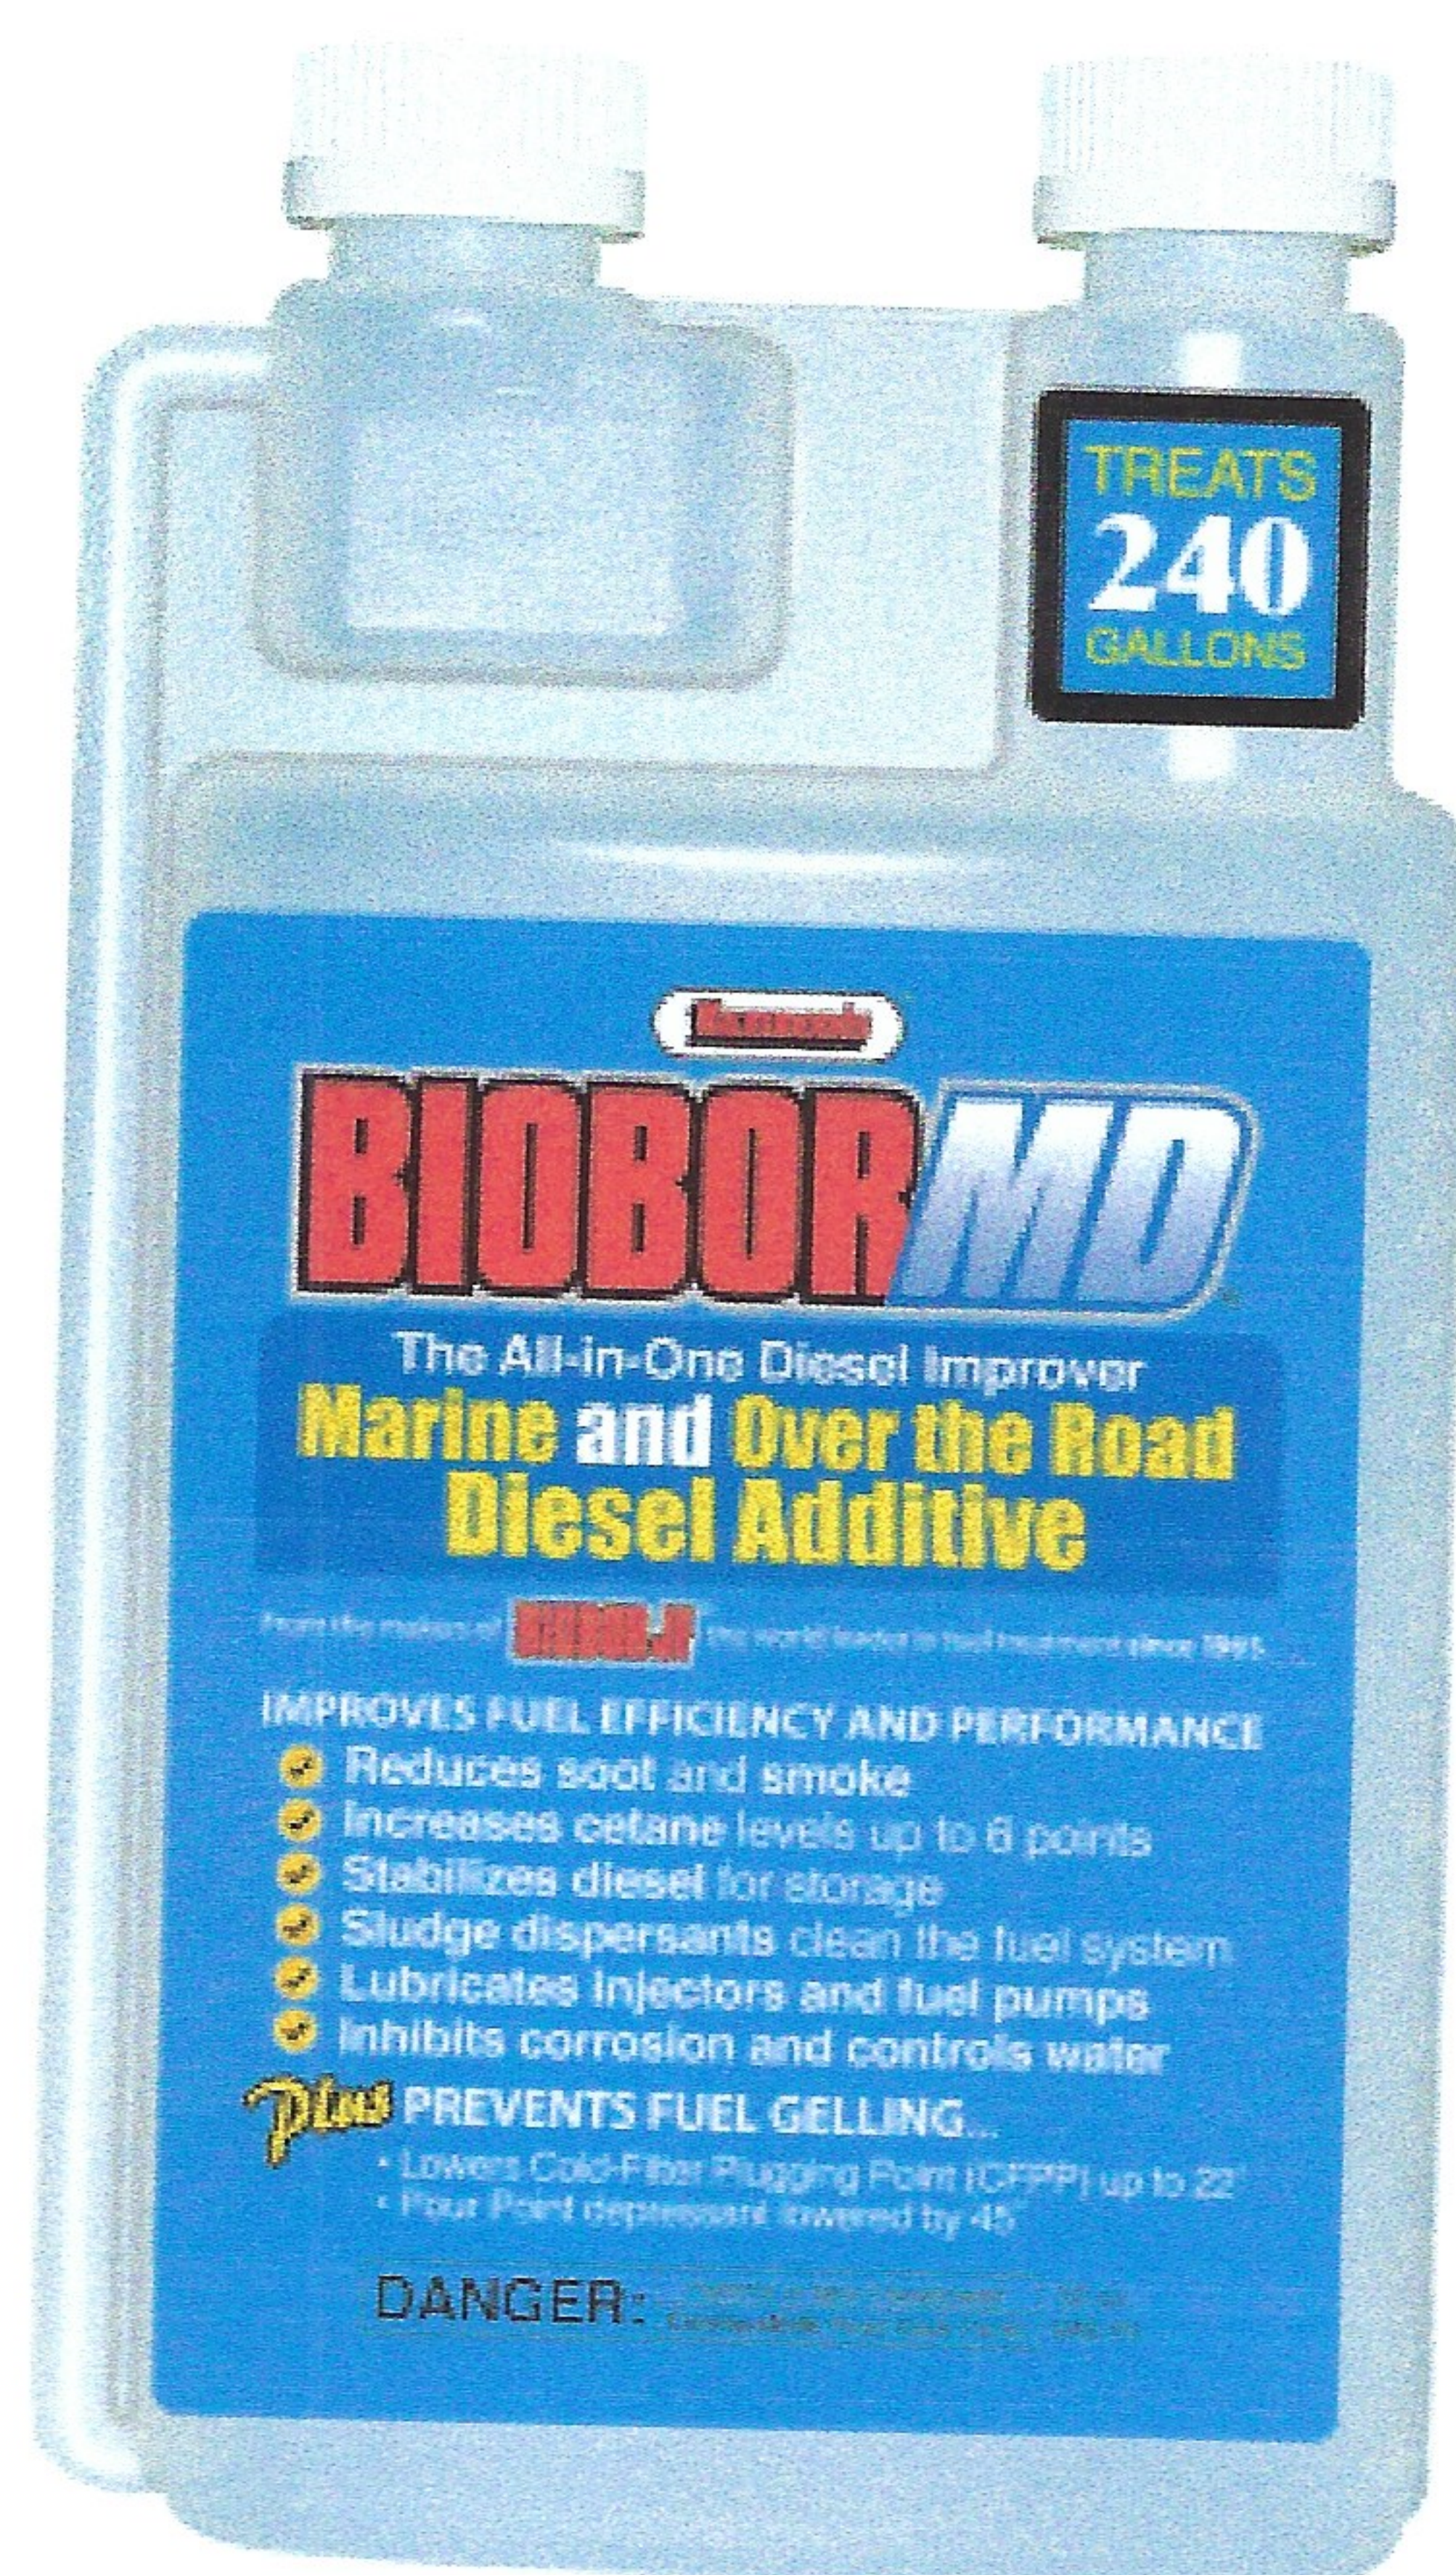

Other Products from Biobor Fuel Additives. Variety of Options.

In addition, Hammonds also offers Biobor EB (Ethanol Buster) which combats the harmful effects of ethanol in gasoline and increases engine efficiency. Ethanol is extremely corrosive and can be detrimental to your engine if not properly blended with the gasoline in your tank. Over time ethanol will separate from the gasoline in your tank. Biobor EB prevents Fuel Phase Separation, cleans disperses sludge and stabilizes gasoline for storage.

Biobor MD (Marine Diesel) is a cutting-edge over-the-road fuel conditioner engineered to enhance fuel performance, increase fuel lubricity and lowering the cold pouring point(CFPP) by up to 25 degrees Fahrenheit. Biobor MD increases the cetane levels for easier cold starting, and cleans the entire system of sludge. Treating your fuel regularly with Biobor MD provides more available horsepower, torque, and fuel economy while reducing up to 94% of soot output and carbon buildup.

The Biobor Family of Fuel Additives are distributed nationally by West Marine and other fine marine distributors.
